yaminidasu@gmail.com · San Francisco Bay Area, CA · [linkedin.com/in/yaminidasu](#) · [yaminidasu.github.io](#)

Senior Data Analyst with 5+ years building data infrastructure that moves the needle. Specializes in regulatory-compliant analytics, ETL automation, and BI at scale, from FDA audit-ready pipelines at a medical device company to petabyte-scale data warehouses at a global semiconductor firm. Known for turning messy, manual processes into clean, governed, automated systems that executives trust, and compliance teams rely on.

SKILLS

Languages	Python, SQL
BI Tools	Tableau, Power BI, Excel (Advanced)
Data Platforms	Snowflake, Databricks, Relational Databases, Data Warehouses
ETL & Modeling	ETL Pipelines, Data Modeling, Data Transformations, Data Integration
Cloud	AWS, Google Cloud (basic), Azure (basic)
Practices	Data Governance, KPI Development, Dashboard Design, Automation, Cross-functional Collaboration

EXPERIENCE

Data Analyst Windfall <i>San Francisco Bay Area, CA</i>	<i>Mar 2026 - Present</i>
- Building and refining ETL pipelines and internal analytics infrastructure for people and donor wealth data, supporting data governance initiatives and improving reporting accuracy across the organization. - Collaborating with cross-functional teams to standardize data definitions and ensure consistency across analytics workflows.	
Data Analyst, Data Infrastructure & Compliance Analytics Nevro Corp <i>San Francisco Bay Area, CA</i>	<i>Jan 2024 - Jul 2025</i>
- Automated SQL and Python pipelines for FDA and global regulatory reporting, cutting preparation time from several weeks to under one week and reducing manual effort by 80%. - Delivered audit-ready datasets and governance documentation that supported a successful FDA audit; data infrastructure held up under full regulatory scrutiny. - Built 10-12 Tableau dashboards for daily and weekly monitoring across 4-5 internal teams, covering complaint, quality, and operations metrics for both frontline and executive visibility. - Defined 5-6 KPIs per month with Quality, Compliance, IT, and Operations teams; established validation rules and governance standards that became the baseline for ongoing data reliability. - Created SOPs, data dictionaries, and documentation to strengthen audit traceability and long-term maintainability of reporting infrastructure.	
Data Analyst, Data & Operations Analytics Qualcomm <i>San Diego, CA</i>	<i>Jul 2020 - Oct 2023</i>
- Architected ETL pipelines migrating data onboarding from a manual process to an AWS data lake, scaling from ~2TB to petabyte-level volumes and automating 20+ project onboardings per week. - Automated 35+ recurring reports, saving 20+ hours per week of manual analysis for 100+ team members across US and India operations. - Built and maintained 35+ Power BI dashboards for global ops teams; standardized KPI definitions and reporting frameworks to align US and India stakeholders. - Built scalable SQL and Python pipelines integrating enterprise systems into curated Snowflake datasets for operational and strategic analysis.	

EDUCATION

B.S. Computer Engineering - California State University, Sacramento	<i>May 2020</i>
